

Max your trash clearance, cost effectively!

Gason's new Rear Presswheel design delivers supreme performance in the paddock, while protecting your back pocket.

With improved trash flow inside the planter frame, superior reliability in dusty conditions and our most cost effective option available, the new Gason Rear Presswheels are designed for the harshest conditions.

New Rear Presswheel design from Gason

We have engineered our Rear Presswheels to deliver even more, for less.

Our new design features:

- OTICO FARMFLEX® presswheel assemblies
 - 80mm wide wedge-shaped semi-pneumatic tyres provide a firm seed bed and good mud shedding
 - PEER® dual row angular contact bearings specifically designed for tillage applications, with six sealing lips at each end for superior reliability in dusty conditions
- All pivots use two hardened steel bushes with a grease reservoir between and pins that are either hardened steel or CL 12.9 bolts
- Double walking-beam presswheels can be set at 176mm (7"), 200mm (8") and 250mm (10") spacings
- Adjustable down-force up to 24kg per wheel
- Toolbar kits available for Gason planters (not compatible with RT Seeders)
- Single wheel assembly available for odd tine layouts.
